

GRO-LAC® AMINE LASER SPRAY DOT INK PINK

Product Number 785-4003

Product Description:

A low VOC, fast dry waterborne ink for environmentally safe Spray Dot ink applications. GRO-LAC® Laser Ink has been specially formulated for use with automatic riveting machines equipped with laser light technology for locating spray dot identification marks. The pink Laser Ink diffuses laser light to create a very distinguishable bright red glow. This provides the machine operator with an easy way to correctly identify drilling positions over TV monitors or by line of sight. This unique Laser Ink glow also makes it easy for the operator to distinguish between sealant splatters, pilot holes and other markings helping to eliminate costly drilling errors.

GRO-LAC® Inks are applied with the Groco #FG-200 Paasche Industrial Airbrush. GRO-LAC® Ink is easily removed from aircraft surfaces using TRANSSEAL® HWAS Gel Remover, product number 989-9106. Clean up is with soap and water eliminating solvent use, aerosol cans and hazardous waste.

Spray Dot Templates may be cleaned by using the non-hazardous TRANSSEAL® HWAS Gel Remover or by utilizing the TRANSSEAL® Template Maintenance System.

Product Data:

Non-Volatile Weight	31.74 +/- 2%
Non-Volatile Volume	28.00 +/- 2%
Weight per gallon	9.05 lbs.
VOC	.90 lbs. per gallon

**May be used on all aircraft surfaces except on bright yellow chromate primers.
