

## TRANSSEAL® METAL COAT

Product Number 989-0027 (White)

### Peelable Protective Coating

#### **Product Description:**

TRANSSEAL® Metal Coat is a mechanically peelable coating used to help reduce the preservation cost of materials that are either shipped or stored. TRANSSEAL® Metal Coat protects metal surfaces from rust and corrosion and will provide protection against environmental hazards such as acid rain, industrial fallout, bird droppings and salt corrosion during extended periods of outdoor exposure.

Applications would include aircraft fixtures, manufacturing equipment, molds, assemblies, racks, metal surfaces on cars, trucks tractors and heavy equipment, metal pipe and tubing.

#### **Application Information:**

TRANSSEAL® should be spray applied as received with no thinning required. Spray equipment can be airless or conventional air.

TRANSSEAL® should be protected from freezing with applications at temperatures no lower than 60° F or higher than 160° F.

TRANSSEAL® must be stirred with moderate agitation for several minutes before each application if this has not been done within the past 12 hours.

TRANSSEAL® may be air or forced dried and turns from a milky white liquid to a tough flexible vinyl film when dry.

TRANSSEAL® film may be removed with high pressure cold water (not hot), high pressure air or simply peeled off by hand.

**TRANSSEAL® METAL COAT**

**Product Number 989-0027 (White)**

**Peelable Protective Coating**

**Product Data:**

Volume of solids at applied viscosity	51%
VOC (lbs./gal.) at applied viscosity	0.0 lbs./gal.
Recommended minimum dry film thickness	2-3 mils (4-6 mils wet)
Weight per gallon	9.01
Applied viscosity	61-66 K.U.
pH	8.0
Coverage per gallon at 2 mils dried film	400 square feet
