

**PRODUCT:** TRANSSEAL® 2-TAC (PARTICLE ENCAPSULATOR)

**CODE:** DCM30300

**SERIES:** 2-TAC (PARTICLE ENCAPSULATOR)

**TYPE:** DOUBLE-COATED POLYESTER FILM WITH  
PAPER RELEASE LINER

**PRODUCT DESCRIPTION:** TRANSSEAL® 2-TAC (Particle Encapsulator) is a double-coated polyester film. The inside of the polyester is coated with a light adhesive that will apply directly to the substrate. The outside of the polyester is coated with a heavy adhesive to collect and encapsulate airborne dirt particles. This product is supplied in roll form.

**APPLICATION:** Simply extract from roll and apply to the substrate, smoothing out all wrinkles. After attaching to the substrate, peel off the carrier sheet exposing the Particle Encapsulator adhesive to airborne dirt particles. When the airborne particles have been totally encapsulated, take the TRANSSEAL® 2-TAC off the substrate and replace it with new TRANSSEAL® 2-TAC.

**PRECAUTIONS:** Keep hands off of the outside of the material when applying to wall substrate, as touching will hinder dirt encapsulation. For industrial use only.
